

Depression Checklist

This checklist is designed as a measure of disorder symptomatology. It must be interpreted in the context of individual client circumstances and as such should be used only in combination with a comprehensive medical and clinical assessment. It is **NOT** a stand-alone diagnostic tool.

- Feeling low, irritable or appearing tearful
- Reduced interest or pleasure in most activities
- Marked increase or decrease in appetite, or significant weight loss
- Difficulties sleeping and waking
- Increased agitation or lethargy
- Fatigue
- Feeling worthless or guilty
- Less able to make decisions or concentrate
- Recurrent thoughts of death or suicide

If a patient has experienced **5 or more** of these symptoms **most of the day, nearly every day**, over at least a **2 week period**, they may be experiencing a **Major Depressive Episode**.

In this case, it is recommended that they be referred to a psychologist for a more comprehensive assessment. To book an appointment with a psychologist, contact Strategic Psychology on [\(02\) 6262 6157](tel:0262626157) or email support@strategicpsychology.com.au.
